9x9 Magic Square

This is a 9x9 Magic Square that I figured out while looking for a Magic Square I might use with a 9x9 grid system of organization that I had applied to a unique design of a wisdom system. Like any good 9x9 Magic Square, all rows columns and main diagonals total to 369. But unlike any Magic Square I've ever seen, it has four Sub-Squares made by totaling the numbers at the corners, middle sides and center to 123. Because of this resulting series of concentric squares converging on a center, I thought it might be neat to make each square a level in a stepped pyramid, thereby introducing some dimensionality to an otherwise flat grid. Enjoy!
